

Safety Surfacing for Playgrounds

Pebble-Flex® Safety Surface

Pebble-Flex® Safety Surface is our porous soft, safety surface solution

- This is a thermoplastic, UV light stable, skid resistant, soft surface over layers of closed cell polyethylene foam, and SBR
- A perfect application for playgrounds, play areas, or any area that requires more resilience than the standard 3/8 inch overlay system

PF SBR /Foam is used for:

- areas that will cover concrete, asphalt , or compacted stone base
- areas that can have a porous surface outdoors
- areas that will have fresh, non-chlorinated water running over/through them
- PF Safety Surface is installed at a thickness that corresponds with the appropriate critical fall height. Please see our fall height chart or speak with a representative for details.

Please see maintenance sheet on page 12 for cleaning and maintenance instructions.
